

Level of Service (LOS) is a qualitative measure that characterizes operational conditions within a traffic stream and includes speed, travel times, freedom to maneuver, traffic interruptions, and the perceptions of motorists and passengers. There are six levels of service, given letter designations from A to F, with LOS A representing the best operating conditions and LOS F the worst. LOS E is defined as the maximum flow or capacity of a system. For most purposes, however, a level of C or D is usually used as the maximum acceptable volume.

**LEGEND**

- Private roads (dashed line)
- Perennial streams (blue line)
- Water (light blue area)
- Railroad (line with cross-ticks)

**TRAFFIC VOLUMES - LEVEL OF SERVICE (LOS)**

- LOS A (Blue line)
- LOS B (Green line)
- LOS C (Orange line)
- LOS D (Red line)

**5916 FAADT** Factored Annual Average Daily Traffic \*

\* The AADT numbers shown on this map are from 2005 and are factored to account for growth.

**SAFETY - HIGH CRASH LOCATIONS**

HCL Lengths of Roadway (Links from 2000 - 2004)  
HCLs have 8 or more accidents within 3 years.

**BRIDGE INVENTORY**

- 2425 - Weskeag Bridge
- 5578 - Spruce Head Bridge
- 6401 - Buttermilk Lane Bridge

0 0.5 1 Miles
